

SEMPRE: Semantic Parsing with Execution

Percy Liang

Stanford University

CS224U

May 18, 2015

Goals

- Show how you can use SEMPRES for question answering on Freebase.
- Highlight the many applications of SEMPRES.

Outline

Review of semantic parsing

Using SEMPRE for Freebase QA

Other applications

Year	Competition	Venue	Position	Event	Notes
Representing  Poland					
2001	World Youth Championships	Debrecen, Hungary	2nd	400 m	47.12

Question answering via semantic parsing

Which states' capitals are also their largest cities?

Question answering via semantic parsing

Which states' capitals are also their largest cities?

semantic parsing

$\mu x. \text{Type.USState} \sqcap \text{Capital.argmax}(\text{Type.City} \sqcap \text{ContainedBy}.x, \text{Area})$

Question answering via semantic parsing

Which states' capitals are also their largest cities?

semantic parsing

$\mu x. \text{Type.USState} \sqcap \text{Capital.argmax}(\text{Type.City} \sqcap \text{ContainedBy}.x, \text{Area})$

execute

Arizona, Hawaii, Idaho, Indiana, Iowa, Oklahoma, Utah

Question answering via semantic parsing

Which states' capitals are also their largest cities?

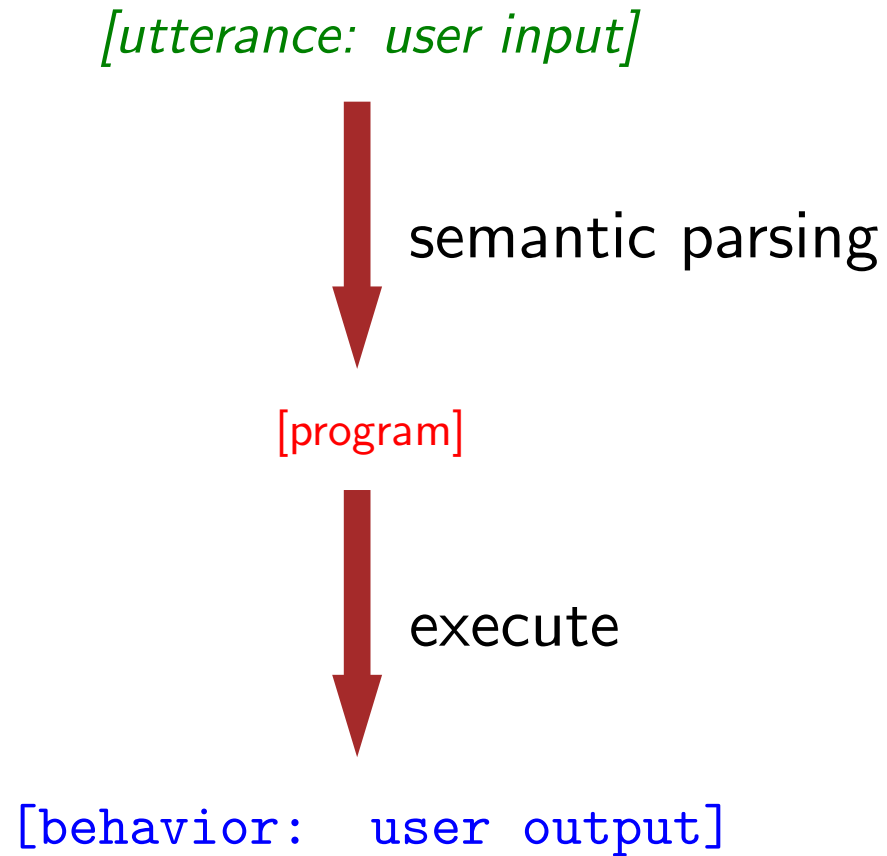

semantic parsing

execute

Arizona, Hawaii, Idaho, Indiana, Iowa, Oklahoma, Utah

General framework

Semantics?

Percy teaches at Stanford.

teachesAt(Percy, Stanford)

Semantics?

Semantic parsing is fundamentally a **translation** task...

Semantics?

Semantic parsing is fundamentally a **translation** task...

How many people live in Seattle?

`count(Type.Person \sqcap LiveIn.Seattle)`

Semantics?

Semantic parsing is fundamentally a **translation** task...

How many people live in Seattle?

R[Population].Seattle

Semantics?

Semantic parsing is fundamentally a **translation** task...

How many people live in Seattle?

$\mathbf{R}[\text{Number}].(\mathbf{R}[\text{Population}].\text{Seattle} \sqcap \text{Year}.2015)$

Semantics?

Semantic parsing is fundamentally a **translation** task...

How many people live in Seattle?

$\mathbf{R}[\text{Number}]. \arg \max(\mathbf{R}[\text{Population}]. \text{Seattle} \sqcap \text{Year} \leq .2015, \text{Year})$

...into a low-level language.

Probabilistic framework

Running SEMPRES

Browse Freebase:

```
freebase/scripts/fbshell.rb
```

Interactive prompt:

```
./run @mode=simple-freebase -Grammar.inPaths cs224u.grammar
```

Grammar rules

three plus four hundred

(rule \$Number (\$PHRASE) (NumberFn))

(rule \$Number (\$Number plus \$Number)

(lambda x (lambda y (call + (var x) (var y))))))

How a rule works:

- Match RHS to produce input derivations
- Call **semantic function** (SemanticFn) on input derivations to produce zero or more output derivations

SEMPRE components

- **Formula**: logical form (Java program or lambda DCS)
- **Value**: denotation (Java object)

SEMPRE components

- **Formula**: logical form (Java program or lambda DCS)
- **Value**: denotation (Java object)
- **Executor**: maps logical forms to denotations (JavaExecutor or SparqlExecutor)
- **Parser**: maps utterances to logical forms (BeamParser or FloatingParser)
- **Learner**: maps examples to parameters

Creating a simple grammar

[demo]

SEMPRE highlights

- Integrates rule-based and statistical methods
- Agnostic to grammar (CFG, CCG, loose or tight)
- Agnostic to logical form (lambda DCS, lambda calculus, Java, AMR)
- Agnostic to answer (any Java object)
- Grammar: SemanticFn, built on CoreNLP
- Learning: online feature-rich discriminative training with embedded execution

By John McGarity

Tokyo will meet carbon reduction targets without the need to use carbon credits in its emissions trading scheme, mainly as a result of increased energy efficiency after the 2011 Fukushima nuclear disaster threatened a crunch in power supply.

Japan's capital, one of the world's largest cities, became the first urban area in Asia to impose emissions caps and carbon trading at the start of the decade, blazing a trail for other cities that are using the market to control climate-changing gases.

But big cuts in emissions through energy efficiency – spurred by a 2011 catastrophic Tsunami and subsequent meltdown of a nuclear reactor – is a timely reminder of how random events and changing government priorities can blunt the effectiveness of emissions trading schemes.

"Setting an ambitious cap for emissions schemes is crucial. Carbon markets should really take the lead in reducing emissions at least cost, but also work in parallel with other policies rather than compete with them" said Sarah Deblock, European Policy Director with the International Emissions Trading Association.

[Report: Fukushima to use 100% renewable energy by 2040](#)

[Report: Japan proposes huge smart meter roll-out to cut emissions](#)

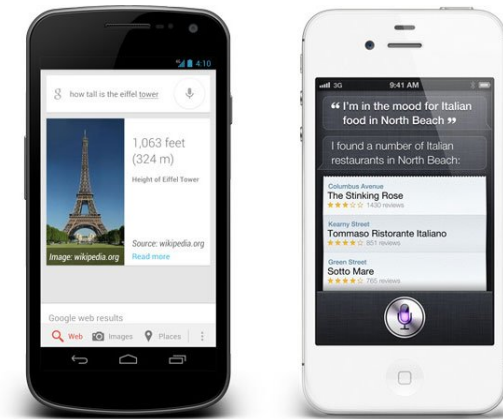

By 2015 EU member states are likely to agree how energy efficiency measures, potentially hindering renewables targets and a 40%
